1.0 Introduction

This investigation report has been prepared by AECOM Technical Services, Inc. (AECOM) on behalf of Encana Oil & Gas (USA) Inc. (Encana). The purpose of this report is to summarize the results of the site investigation activities performed at the Tribal Pavillion 12-13 (TP 12-13) pit location within the Pavillion Natural Gas Field east of the town of Pavillion, Fremont County, Wyoming (see **Figure 1-1** for a site location map). The work activities completed at the pit site were detailed in the August 18, 2011 *Draft Pavillion Natural Gas Field, Fremont County, Wyoming, Field Work Plan for Site Investigations – August and September 2011* (AECOM 2011) (work plan).

The TP 12-13 location was drilled in 1978 and plugged and abandoned in 2001. This location was never subject to environmental investigation. The site was identified by an area landowner in 2011 as an area of concern requiring a field investigation. This site was selected for pit investigation by the Pavillion Field Working Group, Pit subgroup. The August/September 2011 pit investigation was targeted toward an area adjacent to an irrigation ditch. The area is currently used for farming equipment storage. This area was identified as the approximate former pit location by the person whom had plowed the location several years ago and believed that he had encountered a pit. This report documents the investigation activities performed at the TP 12-13 pit location in accordance with the field work plan.

2.0 Summary of Field Activities

The primary field activities conducted at TP 12-13 included: utility clearance; soil boring advancement and soil sampling; and final field surveying of all boreholes.

2.1 Ground Disturbance Activities

In accordance with Encana's Ground Disturbance Practice, all utilities within a 100 foot radius search area were marked. All utilities within 15 feet of a proposed ground disturbance location were positively identified using air and water excavation.

2.2 Soil Assessment

Four soil borings were advanced at the site using direct-push drilling technology following utility clearance. Soil borings SB-1-11 (TP 12-13) through SB-4-11 (TP 12-13) were advanced in the approximate location of the former pit (south of the irrigation canal) as shown on **Figure 2-1**. Drilling activities were performed by Inberg Miller Engineers (IME) of Riverton, Wyoming on August 31, 2011. Each soil boring was logged by a field geologist. Photoionization detector (PID) headspace readings were collected and recorded at every 2-foot interval. No additional soil borings were necessary based on lack of visual observations of impacts and PID readings less than 100 parts per million (ppm). The soil boring logs are provided in **Appendix A**.

The soil borings ranged from depths of 8 to 10.5 feet below ground surface (bgs). These depths were just below the water table which was encountered at a range of approximately 7 to 9.5 feet bgs. Since the potential for groundwater impacts was not identified based on field screening and observations, the soil borings were not extended any deeper and monitoring wells were not constructed.

One soil sample was collected from each boring from the interval immediately above the water table. All soil samples were collected for analysis of total petroleum hydrocarbons (TPH) as gasoline range organics (GRO) and diesel range organics (DRO), as required by WOGCC. Although none of the soil borings exhibited evidence of soil impact based on field screening and observations, one sample also was selected for analysis of benzene, toluene, ethylbenzene, and total xylene (BTEX) and semi-volatile organic compounds (SVOC). The sampling and analysis conducted on each boring is provided below:

- SB-1-11 (TP 12-13) – One sample was collected for TPH, BTEX, and SVOC analyses;
- SB-2-11 (TP 12-13) – One sample was collected for TPH analysis;
- SB-3-11 (TP 12-13) – One sample was collected for TPH analysis; and
- SB -4-11 (TP 12-13) – One sample was collected for TPH analysis.

All soil samples were submitted to Environmental Science Corporation (ESC) of Mt. Juliet, Tennessee, for laboratory analysis. Analysis of TPH-GRO and DRO was completed using (U.S. Environmental Protection Agency (USEPA) Method 8015. Analysis of BTEX was completed using USEPA Method 8260B. Analysis of SVOC was completed using USEPA Method 8070C. A discussion of analytical results is provided in Section 3.1.

All soil borings were surveyed and are shown on **Figure 2-1**. All soil borings were abandoned with hydrated bentonite chips.

3.0 Analytical Sample Summary

3.1 Soil Sample Results

All soil samples were submitted for analysis of TPH-GRO and DRO. One sample was also analyzed for BTEX and SVOC. Soil sample TPH results were compared to the TPH cleanup level of 1,000 milligrams per kilogram (mg/kg). This concentration represents the most stringent cleanup level identified by the Wyoming Oil and Gas Conservation Commission (WOGCC) "Guideline for Closure of Unlined Production Pits". Concentrations of BTEX and SVOC from all soil samples were compared to the residential soil cleanup level and the migration to groundwater cleanup level, both based on the Wyoming Department of Environmental Quality/Solid and Hazardous Waste Division (DEQ/SHWD) cleanup level spreadsheet effective June 30, 2009. Analytical soil sample results are summarized in **Table 3-1** and are shown on **Figure 3-1**. A copy of the laboratory report is provided in **Appendix C**.

Concentrations of TPH-GRO, TPH-DRO, BTEX, and SVOC were not detected in any of the soil samples collected at the site.

4.0 Discussion

Analytical results at the site indicate that constituents of concern were not detected at the site. No further investigation is recommended at site TP 12-13.

Tables

Draft - Table 1 - Soil Sample Analytical Results, August 31, 2011
Tribal Pavillion 12-13, Pavillion Natural Gas Field, Wyoming

Sample Name					SB-1-11[1]	SB-2-11	SB-3-11	SB-4-11
Sample Depth (feet)					6-8	7-8	9-10	9.5-10.5
Sample Date					8/31/2011	8/31/2011	8/31/2011	8/31/2011
Analyte	Units	Method	Residential Soil Cleanup Levels (mg/kg)[3]	Migration to Groundwater Cleanup Levels (mg/kg)[3]	Results			
TPH (GC/FID) Low Fraction	mg/kg	GRO	1,000 (Combined)[2]		< 0.50	< 0.50	< 0.50	< 0.50
TPH (GC/FID) High Fraction (DRO Wyoming C10-C32)	mg/kg	8015			< 4.0	< 4.0	< 4.0	< 4.0
Benzene	mg/kg	8260B	1.1	0.00023	< 0.0050	--	--	--
Toluene	mg/kg	8260B	5,000	1.7	< 0.025	--	--	--
Ethylbenzene	mg/kg	8260B	5.7	0.0019	< 0.0050	--	--	--
Total Xylenes	mg/kg	8260B	600	0.23	< 0.015	--	--	--
Semi-Volatile Organic Compounds (SVOC)	mg/kg	8270C	Note[3]	Note[3]	Not Detected[1]	--	--	--

Notes:

-- = not analyze; < = sample result is less than the laboratory detection limit; DRO = diesel range organics; FID = flame ionization detector; GC = gas chromatograph; GRO = gasoline range organics; mg/kg = milligrams per kilogram; NA = not available; TPH = total petroleum hydrocarbons

[1] Sample SB-1-11 6-8 was analyzed for SVOCs using method 8270C. All SVOCs were below detection limits (see corresponding laboratory report).

[2] The TPH cleanup level of 1,000 mg/kg is based on the most stringent cleanup level identified in the Wyoming Oil and Gas Conservation Commission "Guideline for Closure of Unlined Production Pits". If TPH is detected at a level greater than 1,000 mg/kg then the appropriate cleanup level will be determined based on the Oil Contaminated Soil Remediation Ranking System (OCSRRS).

[3] Soil cleanup levels are based on the Wyoming Department of Environmental Quality/Solid and Hazardous Waste Division (DEQ/SHWD) cleanup level spreadsheet effective June 30, 2009.

Attachment A
List of Analytes with QC Qualifiers

Sample Number	Work Group	Sample Type	Analyte	Run ID	Qualifier
L533941-04	WG553588	SAMP	Isophorone	R1845992	J4
	WG553368	SAMP	a,a,a-Trifluorotoluene	R1850352	J1
	WG553867	SAMP	o-Terphenyl	R1847632	J7
L533941-06	WG553588	SAMP	Isophorone	R1845992	J4

Attachment B
Explanation of QC Qualifier Codes

Qualifier	Meaning
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits
J4	The associated batch QC was outside the established quality control range for accuracy.
J7	Surrogate recovery limits cannot be evaluated; surrogates were diluted out

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC.
Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods,it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Differrence.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromotography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

Quality Assurance Report
Level II

L533941

September 13, 2011

The data package includes a summary of the analytic results of the quality control samples required by the SW-846 or CWA methods. The quality control samples include a method blank, a laboratory control sample, and the matrix spike/matrix spike duplicate analysis. If a target parameter is outside the method limits, every sample that is effected is flagged with the appropriate qualifier in Appendix B of the analytic report.

Method Blank - an aliquot of reagent water carried through the entire analytic process. The method blank results indicate if any possible contamination exposure during the sample handling, digestion or extraction process, and analysis. Concentrations of target analytes above the reporting limit in the method blank are qualified with the "B" qualifier.

Laboratory Control Sample - is a sample of known concentration that is carried through the digestion/extraction and analysis process. The percent recovery, expressed as a percentage of the theoretical concentration, has statistical control limits indicating that the analytic process is "in control". If a target analyte is outside the control limits for the laboratory control sample or any other control sample, the parameter is flagged with a "J4" qualifier for all effected samples.

Matrix Spike and Matrix Spike Duplicate - is two aliquots of an environmental sample that is spiked with known concentrations of target analytes. The percent recovery of the target analytes also has statistical control limits. If any recoveries that are outside the method control limits, the sample that was selected for matrix spike/matrix spike duplicate analysis is flagged with either a "J5" or a "J6". The relative percent difference (%RPD) between the matrix spike and the matrix spike duplicate recoveries is all calculated. If the RPD is above the method limit, the effected samples are flagged with a "J3" qualifier.
